WORK EXPERIENCE

Data Science Intern - MoneyMatch Sdn Bhd

September 2025 - January 2026

- Automated partner balance and COI calculations using n8n, reducing daily processing time from more than 2 hours to 10 minutes and eliminating 100% of manual workload for the operations team
- Automated the partner reconciliation process by building a simple upload-based interface that preprocesses and compares transaction records, enabling the finance team to complete reconciliations for any month in around 5 seconds and clearing backlogs that had been pending for multiple months
- Rebuilt internal data applications from R to Python, improving scalability and enabling better concurrency handling, which enhanced system performance and supported more efficient data processing at MoneyMatch

Networking Intern - WLC Solutions

August 2024 - October 2024

- Assisted in networking tasks such as IP addressing, troubleshooting and network planning
- Supported the team in implementing VLANs and subnetting strategies to optimize network segmentation and performance

PROJECTS

Song Lyrics Appropriateness Classification (Final Year Project)

Developed an NLP-based classification system using BERT and deep learning models to classify song lyrics as appropriate or inappropriate for children. Performed data collection, preprocessing, model training, hyperparameter optimization with Optuna, and evaluation using classification metrics. Deployed the trained model to the Hugging Face Hub for accessible model hosting and inference. Integrated the trained model into an interactive Python Dash dashboard with Spotify API integration for song search and currently playing track analysis.

LUCID — Smart Grid Power Forecasting | SAS Hackathon 2025 — Global Champion

Developed a power forecasting model using SAS Viya to predict electricity demand from continuous IoT data, supporting proactive grid management and improved energy efficiency. Contributed to LUCID, a smart-grid analytics solution integrating predictive insights and fault detection capabilities. **Awarded Global Champion in the Energy Track at the SAS Hackathon 2025.**

Premier League Goals Prediction Algorithm

Developed a custom prediction algorithm using Python to forecast football match goals using shots on target by Premier League teams. Used techniques such as data preprocessing and performance evaluation metrics to build an algorithm with 84% accuracy. Achieved by using the shot efficiency rate of each team and their respective shots on target.

TECHNICAL SKILLS AND TOOLS

Programming: Python, R, SQL, Java

ML / AI: PyTorch, Transformers, NLP, Machine Learning, Deep Learning, Hyperparameter Tuning

Data / Analytics: Pandas, Data Preprocessing, Statistical Analysis, Hypothesis Testing, Time Series Forecasting

Tools / Platforms: SAS Viya, Power BI, Git/GitHub, Hugging Face, n8n, REST APIs

EDUCATION

Bachelor's Degree in Computer Science (Data Analytics)

November 2024 - Present

Asia Pacific University | **CGPA: 3.85 (Vice Chancellor's List 2024/25)**

Relevant Modules: Programming for Data Analysis, Data Management, Object-Oriented Programming with Java, Data Structures, Data Mining and Predictive Modelling, Business Intelligence Systems, Text Analytics, Optimization and Deep Learning, Database Security Systems

Diploma in ICT (Data Informatics)

August 2022 - October 2024

Asia Pacific University | **CGPA: 3.71**

Relevant Modules: Introduction to Data Analytics, Introduction to Artificial Intelligence, Behavioral Science and Marketing Analysis, Programming with Python, Database Systems

Sijil Pelajaran Malaysia 2021 (SPM)

March 2022

SMK Seksyen 4 Bandar Kinrara | **Grade: 9A**

EXTRACURRICULAR EXPERIENCE

PwC Trust Ambassador

July 2025 - June 2026

- Represent PwC Malaysia on campus to promote the firm's values of trust, integrity, and transparency among the student community
- Organize and facilitate campus engagement activities in the future, including networking events, workshops, and panel sessions to strengthen PwC's brand visibility and student outreach
- Act as a liaison between PwC and university students, sharing insights about career opportunities, workplace culture, and the importance of trust in professional environments

APAC Design Team and PR Team

November 2022 - January 2024

- In charge of designing social media posts and captions for club activities and competitions
 - Managed social media accounts of Asia Pacific Analytics Club (Facebook and Instagram)
 - Contributed in planning for multiple events such as annual member meetups, treasure hunts, and industry talks (Data Dash, Pizza and Playtime)
 - Acted as an emcee for "APAC x Graduan Level Up Your Career" talk and "GIT It Up" workshop
-

COMPETITIONS

SAS Hackathon 2025 - GLOBAL CHAMPION (Energy Track)

September 2025 - October 2025

Developed LUCID, a smart-grid analytics solution during the SAS Hackathon 2025, using SAS Viya and open-source tools to analyse continuous IoT data streams, enabling predictive insights, fault detection, grid self-healing capabilities, reduced renewable energy waste, and improved operational efficiency.

UMDAC Datathon 2024 - FINALIST

December 2024

Applied statistical analysis and machine learning to uncover insights from a cryptocurrency dataset. Project includes time-series analysis, risk profiling, and close price prediction to support smarter trading strategies and financial decision-making.

REFERRALS

Ashdave Singh Gehoonia

Chief Product and Data Officer, MoneyMatch
ashdave@moneymatch.co, +6016-6887281

Ts. Mohammad Namazee Bin Mohd Nizam

Lecturer, Asia Pacific University
